

CloudChart: Real-Time Project Insights from the Cloud

CloudChart is a cloud-based extension of the Wadugs system that brings your project data to life—anytime, anywhere. Designed for seamless integration with the Wadugs desktop platform, CloudChart enables teams to visualize, track, and analyze geophysical and bathymetric survey data through a user-friendly web interface.

Whether you're in the office or out in the field, CloudChart ensures your latest data is always within reach. With real-time syncing, secure cloud storage, and responsive dashboards, CloudChart helps you make faster, data-driven decisions without the hassle of manual exports or file transfers.

Key Features & Benefits

No Server Setup Required

Users don't need to install or manage any backend infrastructure. CloudChart is ready to use out of the box with cloud-hosted services, reducing technical overhead and speeding up deployment.

Seamless Integration with Wadugs

CloudChart is built on the same platform as Wadugs. It uses the exact same data structures and workflows, so you don't need to export, convert, or rely on third-party tools—everything just works.

Faster Turnaround for Decision Making

Real-time access to survey data empowers project managers and decision-makers to respond quickly to field conditions—no delays, no extra tools, just direct insight.

Save Time and Cost

With no need for server setup, data conversion, or third-party platforms, CloudChart streamlines your workflow. This results in significant savings in both operational time and project costs.

Remote Monitoring from Anywhere

CloudChart enables stakeholders to monitor project progress from any location. Whether in the office, at home, or on-site, teams stay aligned and informed at all times.

Live Vessel Tracking

Vessel locations are tracked live on the map, allowing both operations and management teams to monitor the progress and safety of offshore activities more effectively.

Client-Friendly Dashboard Access

Give clients transparent access to selected data via a secure, read-only dashboard. This keeps them informed and reduces back-and-forth reporting.

Map Annotations & Collaborative Markup

Add comments directly on the map and draw custom shapes such as polylines, and polygons. This allows teams to highlight areas of interest, mark observations, and communicate spatial insights clearly—directly within the CloudChart Map interface. These annotations help improve collaboration between field teams, analysts, and decision-makers without relying on external tools.

Secure and Scalable

The platform grows with your needs. Whether handling one project or dozens, CloudChart ensures your data is protected and available without performance issues.
